1 Webinar Part 2: 'ICEBERGS AHEAD: DISCOVER - (re) understand applica- tions'

Part 2: "Icebergs ahead: DISCOVER - (re) understand applications" on January 29th, 2025 at 11:00 a.m. CET.

In the first part of our webinar series with over 80 interested parties worldwide, we presented the DISCOVER - CLEAN UP - MODERNIZE concept. In the next episode we will now have a deeper dive into the DISCOVER area.

You know the situation: The original developers of the COBOL and PL/I applications are rarely or no longer available. The successors, new teams or external service providers are responsible for maintenance, modernization or new implementation. But there is only a shrug of the shoulders when questions are asked about the legacy applications. In order to guarantee smooth day-to-day

business, you need a comprehensive and in-depth understanding of your applications.

In the second part of our webinar series, we will show you how you can automatically (re)gain a deep understanding of your applications and get started with your modernization journey.

We would be delighted to continue or start this journey with us on January 29th 2025 at 11:00 am CET.

Book your free ticket directly here:

If you prefer to participate the webinar in german (22.01.2025), [register here](#).

P.S.: If you missed the first part, get the [recording here](#) →

2 Recording - Webinar Part 1: 'ICEBERGS AHEAD - Software Modernization made easily'

Our first webinar 'ICEBERGS AHEAD - Software Modernization made easily' took place on November 13th, 2024.

Using the story of the Titanic, we showed you how you can deal with today's challenges in application modernization in a relaxed manner and avoid every iceberg.

The first episode of our webinar series on automated software modernization met with great interest. Over 80 interested parties had registered. You couldn't attend? Then you can request the recording here. The second episode in this series will be available at the end of January. The focus will then be on (re-)understanding applications.

Slides and Recording of the Webinar

You couldn't attend?

No Problem: [You can request the presentation slides and the recording here.](#)

Also read our text series "Iceberg Ahead"

Text series: Iceberg Ahead

In the text series "Iceberg ahead", our colleague Hans Nickessen describes his experiences in dealing with legacy applications.

Read which possibilities there are to realise the added value of a modernisation. .

3 27th GI Workshop: Software-Reengineering & -Evolution

"Software Reengineering and Evolution" is an evergreen in software development. However, new technologies and possibilities in the area of development lead to ever new challenges in dealing with the existing software.

FACHGRUPPE
SRE

The expert group Software Reengineering and Evolution (SRE) within the Gesellschaft für Informatik (GI) - the German-speaking professional society for computer science - deals with all aspects of software reengineering, software maintenance and software evolution. In principle, this includes all activities whose goal is analysis, visualisation, evaluation, improvement, migration and further development.

Workshop Software Reengineering & Evolution (WSRE)

With the conference series Workshop "Software Reengineering and Evolution" (WSRE), the SRE expert group aims to bring together practice and research and to promote professional exchange with a variety of current topics.

Practitioners and researchers are cordially invited to report on experiences, projects, research results, methods, tools and "war stories" in this field at the WSRE, to present their current work and to discuss it constructively in an open environment..

Save the date for WSRE 2025

We are pleased to announce the next Workshop on Software Reengineering and Evolution (WSRE): 27.

WSRE 2025 will take place from 09.-11.04.2025 in Bad Honnef!

Call4Papers

You would like to present your challenges or solutions and tools on the topic and exchange ideas with other interested parties? Anyone can take part - even if you are not a member of the GI.

- Contributions can be submitted until 14.02.2025.

Take the opportunity for direct exchange and networking. Participation is open to everyone. All information about the workshop and how to submit contributions can be found [here](#).

WSRE 2024

The 26th Software Reengineering & Evolution Workshop of the GI Software Reengineering (SRE) specialist group took place on 29 and 30 April in Bad Honnef.

How to Quickly (Re-)Gain the Knowledge about Your COBOL Applications

At this year's tool session, Dr. Daniela Schilling, CEO of Delta Software Technology, presented:

“When the English Dictionary is Not Enough - Understanding COBOL Applications with AMELIO Logic Discovery”

In order to (re)understand large, complex COBOL applications that have grown over decades, it is not enough to be able to read the code. Instead, it is necessary to abstract from technical details and gain knowledge at a glance. Appropriate views of the application are also required for various tasks. We present AMELIO Logic Discovery, a tool for automated knowledge (re)gain.

You couldn't attend? No problem!

[Contact us](#) directly and find out how [AMELIO Logic Discovery](#) can help you to re-understand your COBOL applications.

4 New Delta Training Courses: Register Now

Anyone using tools to automate software development needs in-depth knowledge of the methods, modes of operation, and capabilities of the tools. And not just “in principle”, but in relation to the concrete environment and task.

Our training courses and workshops help you to use Delta tools efficiently and to optimise the development of your applications: Practice-oriented and taking into account your main areas of interest.

ADS Basics - ADS for Administrators - ADS Refresher - ADS on Eclipse - ADS What's new

Here you will find the new dates:

- 05.03.-07.03.2025 and 17.09.-19.09.2025
