1 Delta ADS Webinar - Refresh & Connect: Short Survey

Delta ADS has been the proven solution for the efficient development of operational backend applications in COBOL and PL/I for almost 50 years. And you too have been benefiting from its advantages for a long time. Even at 50, development and tools are still evolving. That is why we would like to inform you about all the new features and improvements in a free webinar and at the same time offer you the opportunity to exchange ideas and experiences with other Delta ADS users. Would you be interested in participating in such a webinar? Which topics relating to development with Delta ADS and the possibilities of the integration into modern development environments such as Eclipse or Visual Studio with Delta IDS would be of particular interest to you?

We are planning the webinar for Q2/2024.

Please reply directly to us using this [form](#) and decide which topics you would like us to cover.

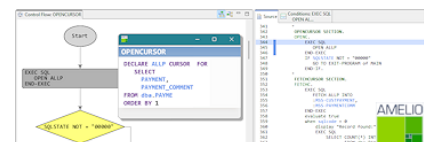

Would you prefer to be informed about the possibilities of

[Delta ADS 6](#) and [Delta IDS](#) in an appointment specifically tailored to the requirements of your company? Then please [contact us](#) to arrange an appointment.

2 AMELIO Logic Discovery 2.5.0

New Visibility for External Information

Only rarely is all the relevant information in a program bundled in one place. Much more frequently, it is distributed throughout the entire program or even stored in other artefacts. AMELIO Logic Discovery provides the knowledge gained with its profound analyses summarised thematically in various perspectives. With the new PeekWindows, it is now also possible to display information that is spread throughout the artefact or even comes from other artefacts.

Get the new AMELIO Release 2.5.0 now and benefit directly from the bundled presentation of all relevant information.

NEWSLETTER

ISSUE FEBRUARY 2024

AMELIO Logic Discovery helps to understand the existing COBOL and PL/I Applications and thus reduces the costs for re-implementation of the existing functions and for the modernization of the applications. Would you like to see the advantages of [AMELIO Logic Discovery](#) for your applications? Then [get in touch with us](#) now!

3 Presentation at the 'Virtual User Group IMS' - Replacing IBM IMS/DB

On February 13th, 2024 at 17:30 (11:30 am EDT | 8:30 am

PDT | 4:30 pm GMT) at the [Virtual IMS](#) (VIMS) User Group Meeting, we will present solutions for "Replacing IBM IMS/DB - Fully Automated and with Highest Security" that enable you to replace IBM IMS/DB in your company and securely modernize your business-critical backend applications.

IBM IMS/DB has been regarded as an absolutely reliable and high-performance database system for decades. Nevertheless, there are good reasons for replacing IMS/DB with a relational DBMS.

But how can such a paradigm shift succeed?

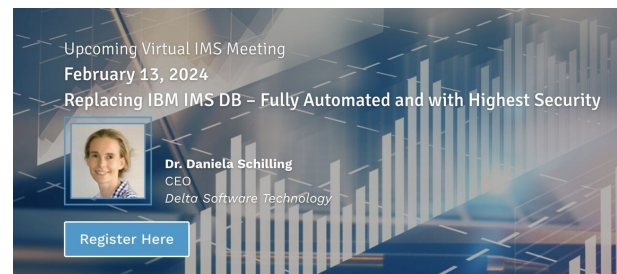

The hurdles are enormous: the applications are business-critical, large, complex and the documentation – where available – is not suitable for the project. As these are large projects, the change should take place in parallel with ongoing main-

tenance and further development and must not disrupt daily business. In our presentation, we will show you how these hurdles can be successfully overcome by means of complete automation and audit-proven processes, with [AMELIO](#).

Looking forward to seeing everyone!

4 GSE zExpertenforum: Presentation of the Software Washing Machine AMELIO

Clean Up Applications with Agility - Using the Washing Machine for Software

COBOL- and PL/I-applications are still performing their tasks reliably. However, the longer these applications live, the more debris and

technical debts accumulate in the applications, making their maintenance and further development increasingly difficult and error-prone. It also makes sense to clean up applications in the run-up to modernisation projects in order to prevent errors and minimise costs.

Traditionally, the clean-up of (legacy) software is done manually. During this process, the variety of possible clean-ups is performed program by program. But very often, not all possible and

necessary clean-up actions are known from the outset. Some of them only come in sight when other clean-up measures have been implemented. A much better and safer strategy is to perform one clean-up task for all programs in one go at the same time, before - using the knowledge acquired - performing the next clean-up task. This requires an approach where each program might be changed more than once. The risk and effort of such an approach can be eliminated by using an automated solution that repeatedly can be applied consistently for as many clean-ups as needed.

As a solution, we will present at the Swiss [GSE z/OS zExpert Forum](#) on 10 April 2024, how the software washing machine with [AMELIO Cleanup](#) enables a secure and agile cleanup of your applications.

The zExpert Forum is the z/OS working group of GSE Switzerland. The forum of “z/OS Experts for z/OS Experts” in Switzerland meets twice a year to discuss experiences and provide interesting presentations.

5 Support-Information: New Product Updates Available

We have released new versions for the following products:

- Delta ADS for COBOL (6.6.4)
- Generator Engine for z/OS (6.6.4)
- AMELIO Logic Discovery (2.5.0)

Delta ADS 6 for COBOL (6.6.4)

In this new release, we have implemented new functions and some changes. The generation has been further optimised.

AMELIO Logic Discovery (2.5.0)

With the new PeekWindows, it is now possible to display information that is spread throughout the artefact or even comes from other artefacts.

Further Information [here](#).

For more information about the new features and improvements, please see the respective release notes and reference books in the [support area](#) of our website.

Get information and [updates](#) right now. You'll find the list of our current [product versions](#) here.
