

# Generator Engine for Linux/Unix/IBM AIX

## Release Notes

RN 26'055.07

# Imprint

<b>Title</b>	Generator Engine for Linux/Unix/IBM AIX Release Notes
<b>Manual-No.</b>	RN 26'055.07
<b>Product</b>	Generator Engine for Linux/Unix/IBM AIX
<b>Date</b>	April 2024
<b>Disclaimer</b>	Delta Software Technology GmbH reserves the right to make improvements in the product described in this manual at any time without notice.

# Generator Engine for Linux/Unix/IBM AIX 6.6.5

## Solved Problems:

- #10623 Generator does not complain if output file definition contains invalid URI
- #10690 Exceptions in code generation if PGD is active and primary source does not contain a PDL card

# Generator Engine for Linux/Unix/IBM AIX 6.6.2

## Solved Problems:

- #10306 PGD output is wrong if name after `.PROG` differs from source file name
- #10363 Generated PGD data not correct for character combination `##`
- #10364 PGD data must ignore parameter references outside code region of a line
- #10365 Generation with PGD aborts report if a line exceeds maximum length

# Generator Engine for Linux/Unix/IBM AIX 6.6.0

## Solved Problems:

- #10223 Performance on IBM AIX has been increased
- #10213 If a source line is longer than expected, the generated stops and shows the name name of the source file

## Extensions

- #10259 Added new function required by ADS Targets version 6.6.0 and higher

# Generator Engine for Linux/Unix/IBM AIX 6.5.2

## **New Function:**

Support of the ftps protocols in macro search paths.

## **Solved Problems:**

#9896                    Add generation timestamp to macro cross reference xml file

# Generator Engine for Linux/Unix/IBM AIX 6.5.1

## **Solved Problems:**

#1682                    Allow case-insensitive process calls (Preview)

#8165                    Incomplete report data if one line in primary source produces several lines in the output

# Generator Engine for Linux/Unix/IBM AIX 6.4.4

## **Solved Problems:**

#9189                    Add information about maximum locations to statistics output

#9188                    Use of X parameters leads to PDL Dumps if used in DBI context

# Generator Engine for Linux/Unix/IBM AIX 6.4.3

## **New Functions:**

The output statistics (option "-s") now also contain information about the usage of the macro cache.

**Solved Problems:**

- #8870            In certain situation (customer's example) the generator aborts because of source line lengths (alle Plattformen)
- #8926            It is no longer possible to ignore macros with no read access in the search path (Microsoft Windows, Unix/Linux-Plattformen)
- #9092            Optimize Cache Handling (Microsoft Windows, Unix/Linux-Plattformen)  
**Note:** the optimized cache handling requires ADS version 6.4.1 or higher
