

## Maximize your *ROEI* ...

... Return On Existing Investment

### Business View

This Business View helps you to learn how SCORE Adaptive Bridges allows you to multiply the value of your existing applications and data stores by creating adaptive services.

Adaptive services integrate what you already have with what you need to build.

SCORE<sup>®</sup> Adaptive Bridges<sup>™</sup> – the latest version of Delta’s proven legacy integration technology that enables you to increase the value of your enterprise projects by reducing the cost of integrating your existing application assets.

### Our Continually Changing World

In this world of continual change your enterprise must be more agile than ever with business units quickly and efficiently working together to create and exploit new business opportunities.

Agility demands integrating and interoperating with external stakeholders: customers, prospects, partners, suppliers, regulators, investors, the press, even the general public.

In the past many IT organizations looked inwards, trying to get the most out of their technical investments. The focus is now clearly on looking outwards, on meeting the needs of stakeholders.

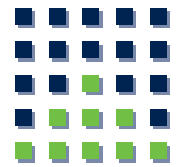

This outward looking focus leads to an ever-increasing number of business requirements and projects that have to be delivered - quickly and within budget. Many projects are now multi-channel, which only serves to increase the technical complexity.

Few enterprises have the time, or resources, to invest in building risky new applications. The solution being increasingly adopted by enterprises is to integrate what they already have with what they need to build.

# Model Driven Legacy Integration™

technology

## Integration in Motion™

The focus on meeting the needs of stakeholders leads to an increasing number of new technologies, platforms, business requirements and other drivers impacting the highly controlled world of IT.

Increasingly it is these new business processes that are driving the architecture of IT's systems and applications - traditionally it has often been the other way around.

No enterprise can afford to invest the time or resources to redevelop core business applications and data stores each time a new service is to be delivered or a new application function provided.

You therefore need an integration architecture that allows you to quickly, easily and efficiently reuse your legacy applications and data stores - to multiply the value of those assets and create a substantial return on your investment.

## Adaptive Services

SCORE Adaptive Bridges provides you a flexible service-based integration architecture with Adaptive Services.

Adaptive services are not middleware or communications protocols - they are an abstract platform-independent model of what needs to be done.

Adaptive services are a model-centric approach to integration rather than the more common code-centric approach.

By investing in an architectural solution to the integration problem you avoid creating complex one-off "spaghetti" integration solutions that are only guaranteed to make your life more complicated in the future!

## Preparing For The Unexpected

Preparing for the unexpected demands a flexible solution. You do not know what is coming next, but you know for sure that are and will continue to be new demands for integrating with your legacy applications and data stores.

There are a wide range of external stakeholders whose requirements drive the need for integration with existing applications and data stores.

Adaptive Services are an approach to integration that gives you the flexibility, performance and adaptivity you need to integrate what you have already built with what you will build in the future.

## Delta Software Technology

Delta Software Technology creates the world's leading family of generative software tools that maximize your return on existing investment (ROEI) in your unique and valuable application assets.

Delta's family of products help you to profit from, care for, renew and grow your existing application assets:

- **SCORE® Adaptive Bridges™** – Service-oriented integration of your application assets, non-invasive and using open standards.
- **SCOUT™** – Stop "fighting the infrastructure". Maintain your application assets in a simple and cost-effective way.
- **SCORE® Transformation Suite™** – Liberate your application assets from old implementation technologies and deployment platforms.
- **ADSplus™** – Grow your existing application assets. Add new functionality to your application assets using existing technologies and platforms.

Delta has 25 years experience in creating enterprise class application development and integration technology for more than 750 customer installations.

Delta is a privately held German company with partners throughout Europe.
